LDAP Configuration Moving

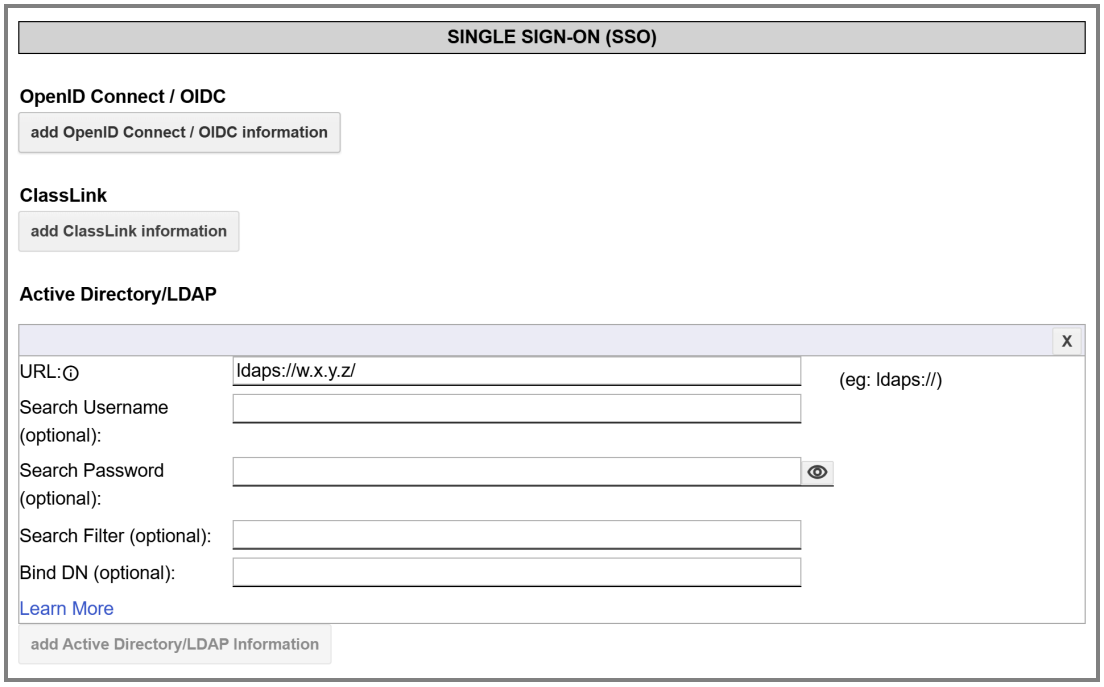

LDAP Configuration Moving to District Information
April 3, 2026

Districts can configure SameGoal to authenticate users via OIDC, ClassLink, or LDAP. Currently, the OIDC and ClassLink authentication methods can be configured by going to **Settings** > **District Information** and scrolling down to the **Single Sign-On (SSO)** section, while LDAP can be configured by going to **Settings** > **Technical Settings**.

However, in order to make workflows more consistent and keep related information together, in the coming weeks, LDAP configuration will be moved into **District Information** next to the OIDC and ClassLink configuration. Once this is moved, if your district has LDAP configured, all LDAP information that has been entered in **Technical Settings** will be automatically added to the new LDAP section in **District Information**.

Tip Only one of the authentication methods should be configured/enabled for your district.
