

School Year Separators and Date Range Filter

School Year Separators and Date Range Filter
July 5, 2022

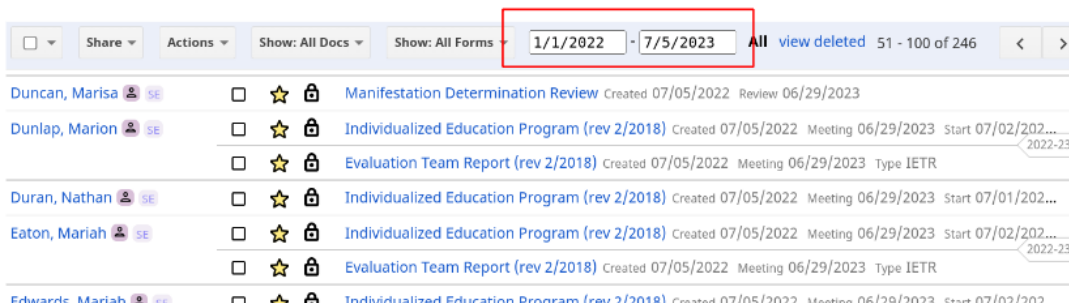

SameGoal stores all documents historically over time. As a result, document list pages often contain documents from multiple school years. SameGoal is releasing two new features this summer to help improve usability and searchability of these list pages.

School Year Separators: School year separators are visual indicators within document list pages that separate already reverse chronologically listed documents from one school year to the next. These separators, appearing on the right within document lists, help users quickly see which documents correspond with a given school year and group documents visually.

The screenshot shows a document list interface. At the top, there are navigation options: Share, Actions, Show: All Docs, Show: All Forms, a date range filter (MM/DD/YYYY - MM/DD/YYYY), All view deleted, and page navigation (1 - 50 of 246). The list contains several document entries, each with a checkbox, a star icon, a lock icon, a title, and a snippet of text. A red box highlights a vertical separator on the right side of the list, which is used to group documents by school year.

Date Range Filter: A date range filter will appear at the top of all document list pages. This filter allows users to filter documents displayed in the list by setting a start and/or end date. The date range filter applies to the main date of the document, shown as the first snippet for any document in a list. If an incomplete document does not yet have this date populated, the document creation date is used as a fallback for filtering and ordering.

The screenshot shows the same document list interface as above, but with a date range filter applied. The date range filter is set to 1/1/2022 - 7/5/2023, and the page shows 51 - 100 of 246 documents. The list contains several document entries, each with a checkbox, a star icon, a lock icon, a title, and a snippet of text. A red box highlights the date range filter input field.

These new features will be available for all districts at all SameGoal License Editions.
