# Translation Updates

*Translation Updates*
*August 1, 2025*

We recently made a couple of exciting updates to our translation feature, which is available to districts on the PRO edition of SameGoal:

- Translation Completion Notifications
- Translation Validations

## Translation Completion Notifications

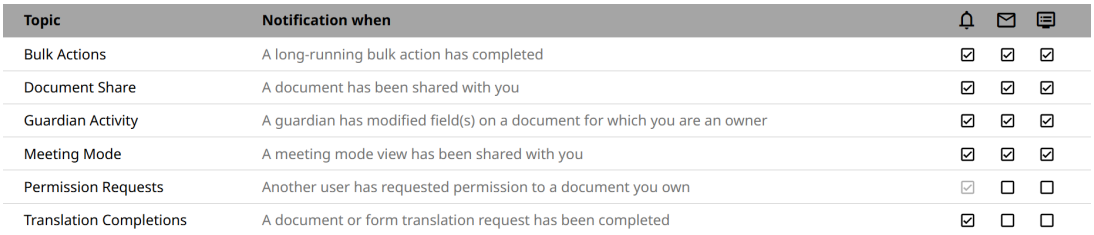

With the addition of translation completion notifications, when a translator marks a form or document translation complete, a notification will be sent to whomever requested the translation. These new notifications will help to streamline translation workflows as users will no longer need to manually check to see if a translation has been finalized.

Users can change how they receive notifications (i.e. in-app, email, web push) by updating their notification preferences.

**Steps** To configure your notification preferences for translation completions:

1. Click on the bell icon [🔔] in the top right of your screen.
2. Click on the settings icon [⚙] in the top right of your notifications tray.
3. While on the **Notification Settings** page, check or uncheck the notification checkboxes to specify how you would like to receive notifications for **Translation Completions**.

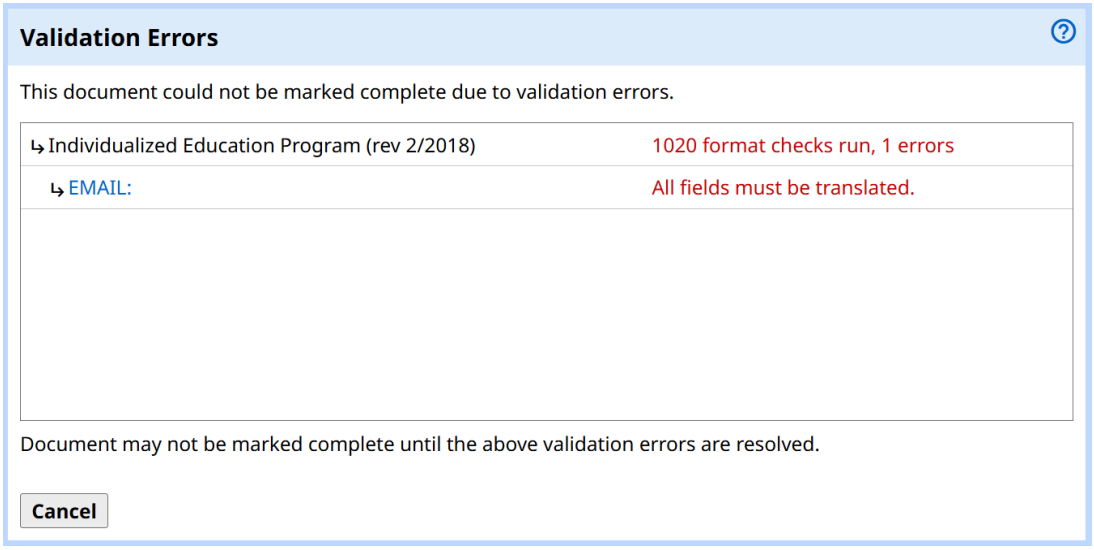

| Topic | Notification when | 🔔 | ✉ | 💬 |
|---|---|---|---|---|
| Bulk Actions | A long-running bulk action has completed | ☑ | ☑ | ☑ |
| Document Share | A document has been shared with you | ☑ | ☑ | ☑ |
| Guardian Activity | A guardian has modified field(s) on a document for which you are an owner | ☑ | ☑ | ☑ |
| Meeting Mode | A meeting mode view has been shared with you | ☑ | ☑ | ☑ |
| Permission Requests | Another user has requested permission to a document you own | ☑ | ☐ | ☐ |
| Translation Completions | A document or form translation request has been completed | ☑ | ☐ | ☐ |

💡 Tip As a reminder, you can check the status of a document translation request at any time in the Document History panel.

## Translation Validation Checks

Document translations will now run validation checks to ensure all fields have been translated before a translation can be marked complete. When a translator attempts to complete a translation, if there are fields that have not been translated, a **Validation Errors** warning will pop up with a list of the remaining errors.

This will help to ensure that translators do not accidentally leave fields blank or mark translations complete prematurely. If a field truly does not need to be translated, the translator can select **This field is not translatable** in order to satisfy the validation check.

Once all translation validation checks have been satisfied, the translator can mark the translation complete.
