

MFA

SameGoal offers email-based multi-factor authentication.

When a user needs to reauthenticate, after they provide their login information, SameGoal will send a verification code to their account email, and they will be prompted to provide their verification code before they can log in.

By default, users will need to reauthenticate monthly, but your district may choose to require reauthentication more frequently.

Steps *To change the reauthentication interval:*

1. When logged in as an administrative user, navigate to **Settings > District Information**.
2. Scroll down to the **Multi-Factor Authentication (MFA)** section.
3. Change the required interval.
 - This reauthentication interval is per device.
