

Alerts and Document Viewer Integration

Integration overview

The SameGoal alerts and document viewer integration generates visual indicator alerts for each Special Program a given student currently participates in. This integration generates an alert for:

- Each **complete** document that is...
- Currently **active** (today is within the start and end dates of the document) and the...
- Document is written in a form type of **interest** (generally the plan document for each Special Program) and the...
- Student is **non-deleted** in SameGoal.

When each alert is clicked, the document is displayed in a **document viewer** web page for easy viewing.

Access to documentation is configured using the third-party system's native access controls/security system. When a **document viewer** link is clicked, no additional authentication is required.

This integration enables staff to quickly and seamlessly access Special Programs documentation from within their SIS. It can be used to streamline communication among Special Programs and general education staff, and can even be used in parent portals.
