Demographics Integration

Integration overview

SameGoal's demographics integration imports student/parent demographics from your student information system (SIS) into SameGoal nightly. For example, a student that is enrolled in your SIS on Monday afternoon appears in SameGoal on Tuesday morning.

All students are included in this integration. This allows staff to create evaluation documentation for newly referred students immediately in SameGoal.

Demographics information imported nightly from your SIS can be found for each student in their **Details** tab. This information prefills student documentation when it is created.

This integration reduces redundant entry, errors and saves staff time. We recommend all customers enable this integration, unless your organization is very small or lacks technical staff to assist with setup.
