Other SIS Integration

SameGoal supports integration with any student information system, even if a streamlined integration method for more popular SISes is not available. Conversely, if your district is using a popular SIS but prefers to integrate in a different way, the following are more general options:

- Generic demographics integration
- Generic alerts and document viewer integration
- Generic state reporting - Use the SameGoal API to extract state reporting files from SameGoal and optionally send them nightly to a third-party SFTP account for ingestion.
