ProgressBook SI/DASL Demographics Integration

Districts use Vendorlink to streamline demographics integration.

- VendorLink is a program designed to simplify integration with third-party systems hosted by many ITCs. VendorLink passes information between DASL and third-party applications using the SIF chapter 6 message structure. If your ITC hosts VendorLink, SameGoal will contact them to enable this integration. District authorization paperwork may be required. However, no further assistance is usually required.

- In cases where VendorLink is not offered by your ITC, ITCs may choose to run SG-Agent.

- If running SG-Agent is not possible, ITCs may then roll their own integration. However, this option requires the most work.
